Summary

Good day,

My name is Kelly Daniel

I'm a full stack developer and a Flutter developer with 3+ years experience in tech. With experience in HTML, CSS, JavaScript, PHP, React, MySQL and Django for building Full stack web applications, and Flutter for cross-platform applications. I also use Django to create Rest API.

I'm an analytical thinker who hardworking and eager to learn and able to solve problems and grasp technical issues quickly.

Furthermore, I also love building web/mobile applications with good UI and great UX.

Experience

Omega Power Ministries / App and Website Developer

APRIL 2021 - PRESENT, Port Harcourt

Worked with the Team at the church to create their mobile apps and improve their website.

Education

ESM Benin / B.Sc. Computer Science

NOVEMBER 2022 - PRESENT, BENIN REPUBLIC, COTONOU

Projects

Tabtrac / Built using Flutter and Django
Tabtrac is a mobile that aims to help small scale business owners keep track of their debts and credits. It helps them store all records, in order to avoid mismanagement of delicate records, with could in turn a major blunder for business owners.
With Tabtrac chances of those scenarios are lessened, if records are stored in the app. The app also helps organize and send reminders to the users. From time to time.

The app is still in development and will be out in the android play store soon.

Today's Journal / Built using Flutter
Today's Journal is a mobile application I built that helps users create goals they want to achieve and write about it daily. It helps them keep track and reflect on their goals and see how far they've gone, and how close they're to accomplish their goals.

Here's the link to the app in the Android play store
